for 1979, Tract C-a

Included herein are site data, density and cover data, and a species list identifying abbreviations used on the cover and density printout. Slope and aspect values on the introductory table are in degrees. Column headings (numbered 1-20) on the raw data tables represent the following sample plots within each transect:

- 5 m segments of the 100 m transect along which cover of woody species was determined
- 5 x 6 m macroplots for density of woody species
- 1 x 1 m microplots for cover of herbaceous species

"C" represents cover determinations, and "D" represents density determinations.

RBOSC Range Productivity Data
For 1979, Tract C-a

Included herein are productivity data (kg/ha and lb/A) for thirty transects in three vegetation types (MB = mixed brush, PJ = pinyon-juniper, and SB = upland sagebrush). PTYPE indicates protected (Y) or unprotected (N) sample locations. Plots were 1 M^2 and were delineated by a circular sampling loop. The species list for 1979 range productivity studies provides names which correspond to species abbreviations on the data print-out.

APPENDIX 3-1.5
RBOSC Browse Condition and Utilization Data
for 1979, Tract C-a

Included herein are browse data for thirty transects in three vegetation types (MB = mixed brush, PJ pinyon-juniper, and SB = upland sagebrush). Column headings are as follows:

Form classes (FORM_CL):

1. All available, little or no hedging
2. All available, moderately hedged
3. All available, severely hedged
4. Partially available, little or no hedging
5. Partially available, moderately hedged
6. Partially available, severely hedged
7. Unavailable
8. Dead

Age Classes (AGE_CL):

S - seedling - less than 0.3 cm basal diameter
Y - young - 0.3 to 0.6 cm basal diameter
M - mature - over 0.6 cm basal diameter
D - decadent - more than 25 percent of crown surface is dead

Leader Use Estimates (LEAD_USE):

Percent of twigs or leaders which are available and show use. No data indicates that the individual plant was dead.

Hedging Classification (HEDGE_CL):

Classification based upon the length and appearance (hedging) of the previous year's growth (the two-year old wood):

L - None to light
M - Moderate
S - Severe
-- Individaul plant dead (form class 8)

Availability (AVAIL):

Visual estimate of the percent of the plant available to deer as browse, i.e., that portion less than six feet high.
